

Radiation Materials Specialist

Learn the necessary properties and characteristics of radiation for proper response.

Guardian Centers of Georgia is proud to offer a revolutionary Radiation Materials Specialist course. This 40-hour course offers participants an incomparable opportunity to learn the necessary properties and characteristics of radiation for proper response.

The Five day curriculum includes two (2) full days of classroom instruction into the applicable properties of radiation while discussing and demonstrating the proper methodologies of instrument utilization, dose management, biological hazards and identifying and measuring radioactive materials. The third, fourth and fifth days involve hands on practical lab and scenario walkthroughs for effective implementation of lecture topics. All Participants receive a Radiation Safety Officer Certificate upon successful completion. *Pending GA ProBoard approval*

* Open to Military and Currently Credentialed Federal, State and Local First Responders Only.
Must have HAZMAT technician Certificate
