

GUARDIAN CENTERS

# DEFENSE SUPPORT OF CIVIL AUTHORITIES

Guardian Centers is an 830-acre training complex, purpose-built to enhance readiness across the DSCA mission set.

Guardian Centers offers the size and scale needed to fully test the limits of consequence management response capabilities at all levels of complexity.

Guardian Centers also has the flexibility to focus on individual tasks, unit-level standards, and collective training, with the capacity to execute expansive, joint operational command and control exercises on a large scale – all with unmatched realism.

At Guardian Centers, training results are tangible. The outcome is improved real-world proficiency with enhanced operational precision.

## UNIQUE CAPABILITIES IN:

- ▶ CBRN reconnaissance, surveying, and sampling
- ▶ Specialized agent detection, identification, analysis, and dispersion modeling
- ▶ Technical rescue and extrication, including structural collapse, vehicle, confined space, trench, water, and high-angle rescue
- ▶ Emergency medical care, casualty extraction, and decontamination
- ▶ Wide-area and technical search planning and operations

# GUARDIAN CENTERS TRAINING COMPLEX

## PERRY, GA

### Key Features:

- Secure 350-acre cityscape with 60 single- and multi-story, multi-composition buildings
- Sealed structures with real-time particulate counting capability
- 400-seat mess hall serving 2,000 personnel per meal
- 100,000 square feet of classrooms, conference rooms, and office/SCIF space
- 350,000 square feet of high-bay warehouse space

**1** Concrete and Steel Collapsed Structures that feature multi-angle breaching points, live role player rescue tunnels, dynamic flooring, and special effects including water, smoke, fire, and electric spark

**2** 1600-foot dual-track train tunnel with 8 moveable commuter train cars, special effects, and passenger platform for rescue operations in enclosed contaminated environments

**3** 2-block residential neighborhood flood zone, featuring up to 8-foot high flooding capacity and eight furnished homes with live role player rescue space; and a 12.5M gallon containment reservoir for conducting water sampling in a contaminated flood environment

**4** 1.1-mile, 4-lane, DOT-spec interstate highway for multi-modal HazMat response training and full-immersion exercise participation

**5** Over 11 acres of gravel and black-top area for staging, emergent care, and decontamination operations

**6** 3-story fully functional emergency operations center with 360-degree observation of the entire city-scape, and an FAA-certified roof-top helipad
