

CWA-HME Small Scale Production

Gain insight into the behaviors and qualities of chemical and explosive threat agents.

Students will gain insight into the behaviors and qualities of chemical and explosive threat agents and recognize the requirements for production and detection of threat agents. The week is structured to reinforce basic concepts, threat agents, production/weaponization considerations and field/laboratory analysis techniques. Hands-on practicals are intended to reinforce lecture topics. A 1-Day FTX will reinforce and evaluate mastery of technical learning objectives in a realistic setting.

For more than a decade, Signature Science's world-class scientific and tactical experts have delivered training to Intelligence Community, DOD CBRNE, and Special Operations personnel which has materially increased their technical and tactical sophistication and made a substantial impact on US National Security.

* Open to Military and Currently Credentialed Federal, State and Local First Responders Only.
